Cement, Concrete, and Aggregates
Index to Volume 6
1984

Number	Issue	Pages
1	Summer	60
2	Winter	152

A-B

Acceptability: Soundness testing and durability of coarse aggregates in concrete (Cady), Summer, 43
Activation: The maturity method: theory and application (Carino), Winter, 61
Admixtures: Studies of the hydraulic properties of belite middling slime (Yanev and Radenkova-Yaneva), Winter, 100
Aggregates
Recycled concrete—a source of new aggregates (Rasheeduzzafar and Khan), Summer, 17
Soundness testing and durability of coarse aggregates in concrete (Cady), Summer, 43
Air: Correlation of hardened concrete air-void parameters obtained by linear traverse with freeze-thaw durability as found by ASTM C 666 (Walker), Summer, 52
Air entrained concretes
The uniformity and influence of silica fume from a U.S. source on the properties of portland cement concrete (Pistilli, Wintersteen, and Cechner), Winter, 120
The variability of condensed silica fume from a Canadian source and its influence on the properties of portland cement concrete (Pistilli, Rau, and Cechner), Summer, 33
Aïtcin, P.-C. and Vezina, D.: Resistance to freezing and thawing of silica fume concrete, Summer, 38
Bickley, J. A.: Trinity square: commentary on concrete test data, Summer, 28
Blast furnaces: Factors affecting the durability of concrete and the benefits of using blast-furnace slag cement (Idorn and Roy), Summer, 3

C

Cady, P. D.: Soundness testing and durability of coarse aggregates in concrete, Summer, 43
Carino, N. J.: The maturity method: theory and application, Winter, 61
Cechner, R.
see Pistilli, M. F., Rau, G., and Cechner, R.
see Pistilli, M. F., Wintersteen, R., and Cechner, R.
Chen, W.-F.: *see* Yener, M. and Chen, W.-F.
Compressive strength
In-place strength of concrete and pullout tests (Yener and Chen), Winter, 90
Recycled concrete—a source of new aggregates (Rasheeduzzafar and Khan), Summer, 17
Resistance to freezing and thawing of silica fume concrete (Aïtcin and Vezina), Summer, 38
A Rockwell hardness test for concrete (Winslow), Winter, 137
The uniformity and influence of silica fume from a U.S. source on the properties of portland cement concrete (Pistilli, Wintersteen, and Cechner), Winter, 120
The variability of condensed silica fume from a Canadian source and its influence on the properties of portland cement concrete (Pistilli, Rau, and Cechner), Summer, 33
Concrete durability: Soundness testing and durability of coarse aggregates in concrete (Cady), Summer, 43
Concretes
Chloride permeability versus air content of latex modified concrete (Kuhlmann and Foor), Summer, 11
Correlation of hardened concrete air-void parameters obtained by linear traverse with freeze-thaw durability as found by ASTM C 666 (Walker), Summer, 52
Experimental examination of fly ash concrete (Marusin), Winter, 125
Factors affecting the durability of concrete and the benefits of using blast-furnace slag cement (Idorn and Roy), Summer, 3
In-place strength of concrete and pullout tests (Yener and Chen), Winter, 90
The maturity method: theory and application (Carino), Winter, 61
Measures of the workability of steel fiber-reinforced concrete and their precision (Johnston), Winter, 74
Optimizing the amount of Class C fly ash in concrete mixtures (Majko and Pistilli), Winter, 105
A Rockwell hardness test for concrete (Winslow), Winter, 137
Trinity square: commentary on concrete test data (Bickley), Summer, 28

D-F

Demolition: Recycled concrete—a source of new aggregates (Rasheeduzzafar and Khan), Summer, 17
Durability
Factors affecting the durability of concrete and the benefits of using blast-furnace slag cement (Idorn and Roy), Summer, 3
Optimizing the amount of Class C fly ash in concrete mixtures (Majko and Pistilli), Winter, 105
Fineness: Effect of fineness on properties of classified cements (Kumar and Roy), Summer, 47
Flexural strength: In-place strength of concrete and pullout tests (Yener and Chen), Winter, 90
Fly ash: Experimental examination of fly ash concrete (Marusin), Winter, 125
Fly ash (Class C): Optimizing the amount of Class C fly ash in concrete mixtures (Majko and Pistilli), Winter, 105
Foor, N. C.: *see* Kuhlmann, L. A. and Foor, N. C.

H-K

Hydraulic pressure: Influence of petrography of argillaceous carbonates on their frost resistance in concrete (West and Shakoor), Winter, 84
Idorn, G. M. and Roy, D. M.: Factors affecting the durability of concrete and the benefits of using blast-furnace slag cement, Summer, 3
Jevtić, D.: *see* Muravljov, M. and Jevtić, D.
Johnston, C. D.: Measures of the workability of steel fiber-reinforced concrete and their precision, Winter, 74
Khan, A.: *see* Rasheeduzzafar and Khan, A.
Kuhlmann, L. A. and Foor, N. C.: Chloride permeability versus air content of latex modified concrete, Summer, 11
Kumar, A. and Roy, D. M.: Effect of fineness on properties of classified cements, Summer, 47

L-M

Latex: Chloride permeability versus air content of latex modified concrete (Kuhlmann and Foor), Summer, 11

Liquefaction: Studies of the hydraulic properties of belite middling slime (Yanev and Radenkova-Yaneva), Winter, 100
Majko, R. M. and Pistilli, M. F.: Optimizing the amount of Class C fly ash in concrete mixtures, Winter, 105
Marusin, S. L.: Experimental examination of fly ash concrete, Winter, 125
Mortars (materials): The maturity method: theory and application (Carino), Winter, 61
Muravljov, M. and Jevtić, D.: Investigation of cement for concrete to be used in structures near seawater, Winter, 142

P

Permeability: Chloride permeability versus air content of latex modified concrete, (Kuhlmann and Foor), Summer, 11
Petrography: Influence of petrography of argillaceous carbonates on their frost resistance in concrete (West and Shakoor), Winter, 84
Pistilli, M. F., Rau, G., and Cechner, R.: The variability of condensed silica fume from a Canadian source and its influence on the properties of portland cement concrete, Summer, 33
Pistilli, M. F.: *see* Majko, R. M. and Pistilli, M. F.
Pistilli, M. F., Wintersteen, R., and Cechner, R.: The uniformity and influence of silica fume from a U.S. source on the properties of portland cement concrete, Winter, 120
Portland cement: Effect of fineness on properties of classified cements (Kumar and Roy), Summer, 47
Pozzolans: Experimental examination of fly ash concrete (Marusin), Winter, 125
Precision: Measures of the workability of steel fiber-reinforced concrete and their precision (Johnston), Winter, 74

R

Radenkova-Yaneva, M.: *see* Yanev, I. and Radenkova-Yaneva, M.
Rasheeduzzafar and Khan, A.: Recycled concrete—a source of new aggregates, Summer, 17
Rau, G.: *see* Pistilli, M. F., Rau, G., and Cechner, R.
Reinforced concrete: Trinity square: commentary on concrete test data (Bickley), Summer, 28
Resistance: Resistance to freezing and thawing of silica fume concrete (Aïtcin and Vezina), Summer, 38
Rockwell hardness: A Rockwell hardness test for concrete (Winslow), Winter, 137
Roy, D. M.
see Idorn, G. M. and Roy, D. M.
see Kumar, A. and Roy, D. M.

S

Seawater: Investigation of cement for concrete to be used in structures near seawater (Muravljov and Jevtić), Winter, 142
Shakoor, A.: *see* West, T. R. and Shakoor, A.
Shrinkage: The variability of condensed silica fume from a Canadian source and its influence on the properties of portland cement concrete (Pistilli, Rau, and Cechner), Summer, 33
Silicon dioxide
Resistance to freezing and thawing of silica fume concrete (Aïtcin and Vezina), Summer, 38
The uniformity and influence of silica fume from a U.S. source on the properties of portland cement concrete (Pistilli, Wintersteen, and Cechner), Winter, 120
Slag cements: Investigation of cement for concrete to be used in structures near seawater (Muravljov and Jevtić), Winter, 142
Slime: Studies of the hydraulic properties of belite middling slime (Yanev and Radenkova-Yaneva), Winter, 100
Strength hydration: Effect of fineness on properties of classified cements (Kumar and Roy), Summer, 47

T-Y

Tensile strength: Influence of petrography of argillaceous carbonates on their frost resistance in concrete (West and Shakoor), Winter, 84
Vezina, D.: *see* Aïtcin, P.-C. and Vezina, D.
Voids: Correlation of hardened concrete air-void parameters obtained by linear traverse with freeze-thaw durability as found by ASTM C 666 (Walker), Summer, 52
Walker, H. N.: Correlation of hardened concrete air-void parameters obtained by linear traverse with freeze-thaw durability as found by ASTM C 666, Summer, 52
Water cement ratio: Investigation of cement for concrete to be used in structures near seawater (Muravljov and Jevtić), Winter, 142
West, T. R. and Shakoor, A.: Influence of petrography of argillaceous carbonates on their frost resistance in concrete, Winter, 84
Winslow, D. N.: A Rockwell hardness test for concrete, Winter, 137
Wintersteen, R.: *see* Pistilli, M. F., Wintersteen, R., and Cechner, R.
Workability: Measures of the workability of steel fiber-reinforced concrete and their precision (Johnston), Winter, 74
Yanev, I. and Radenkova-Yaneva, M.: Studies of the hydraulic properties of belite middling slime, Winter, 100
Yener, M. and Chen, W.-F.: In-place strength of concrete and pullout tests, Winter, 90
